DANIEL TIMMERMANS

JUNIOR FRONT-END DEVELOPER

PROFILE INFO.

Hi there, It's Daniel, I'm a freshly squeezed junior Front-end Web developer trained at CEPEGRA Brussels. Now my goals are to implement everything I learned by joining a development agency to perfect my knowledge and learning to become a successful professional front-end web developer.

MY EXPERTISE.

Creating website with:
HTML5/CSS3
Sass/SCSS
Bootstrap
Mobile First
JavaScript
jQuery
React JS in progress
Wordpress
github

MY WEB DEVELOPMENT EDUCATION HISTORY.

FRONT-END WEB DEVELOPMENT

Cepegra Brussels / Nov. 2021 - May 2022

- **Production of newsletters:** Creation of compatible newsletters for the different mailboxes.
- **Production of websites:** Creation of responsive websites (mobile first) respecting the separation of content, the cutting of models, the design and the layout of graphic elements; respecting the integration of pages according to web standards, optimizing accessibility and being attentive to the compatibility on different browsers and platforms.
- **Sass/Scss:** Use of SCSS in Sass, flexboxes & grid for layouts, jS and jQuery to trigger and create animations.
- **javaScript + libraries (jQuery/ReactjS):** DOM manipulations: reactions to events (click, scroll, mouse over), responsives menus, css animations, modal windows, svg's animation, happenChilds.
- **HTTP request**: Use of the ajax() & fetch() methods to perform asynchronous HTTP requests.
- **React jS:** Basic knowledge of React jS after self-training in e-learning such as installing and using React app; creating components and functional components using hooks; use of ES6, JSX.
- **Design:** Use of software like affinity designer and photo, use of Figma for graphic design of sites or app's mockups.
- **Wordpress:** Creating custom wordpress theme with wordpress php to create a dynamic and personalized back office for the customer using custom fields, custom post types and using the wordpress pluggins.
- **Workflow:** Use of github to create repositories, branches, commits, and pull requests, use of gulp to automate tasks like minification in the development workflow.
